

Standardized tests, GPA and the school the student is applying to are by far the most important factors that determine admission success. This should come as no surprise. What is surprising is how little other factors matter. Sports can be a huge time sink yet make no difference to a successful admission. Unless the student is a star recruited athlete, a fraction of the time spent on sports would be better spent improving standardized tests, especially the SAT or ACT score.

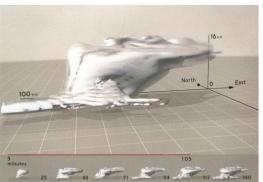

Drilling into overall factor importance opens a filter-able histogram of admitted candidates.

Any factor can be compared against any factor. Tooltips show acceptance results of a given applicant. The user's profile appears in comparison to all other candidates
